SUMMARY

Recent Computer Science graduate with a strong focus on IT operations and data engineering. Experienced in managing systems, ensuring high availability, and supporting reliable infrastructure. Skilled in building and maintaining efficient, scalable data pipelines, as well as implementing monitoring solutions to ensure system reliability. Passionate about leveraging technology and data to deliver practical, high-impact solutions.

EXPERIENCE

T2 Business Simplified Company Operations Engineer Intern	June 2025 – Aug 2025
- Managed and configured 3+ Linux and Windows servers for IT infrastructure tasks. - Performed database setup and management using MySQL and SQL Server, with a focus on high availability and replication. - Implemented and tested load balancing concepts to improve system availability and performance. - Configured and deployed Nagios, Cacti, and Grafana to monitor 4 servers and services, enhancing system visibility and enabling faster issue detection.	

EDUCATION

University of Qassim Bachelor's Degree in Computer Science GPA: 4.92 / 5 First Class Honors	2021 - 2026
---	--------------------

SKILLS

Hard Skills: - Programming Languages: Python, SQL, C++ - Databases: MySQL, SQL Server, SQLite. - Operating Systems: Linux (Ubuntu), Windows. - Cloud: Google Cloud Platform, AWS. - Developer Tools: BigQuery, Git, GitHub, Google Colab, Power BI.	Soft Skills: - Teamwork, - Problem-Solving - Critical Thinking - Time Management - Communication - Adaptability.
--	---

PROJECTS

Graduation Project – NABEH Python, Flask API, Flutter, Firebase, Computer Vision - Designed and developed NABEH, an AI-based system for real-time monitoring of swimmers in swimming pools. - Implemented computer vision model to analyze swimmer movements and detect drowning incidents and emergency situations with 97% accuracy. - Built a monitoring application that displays live detection results for supervisors. - Integrated instant alert notifications to lifeguards when dangerous situations are detected.
Training Project – NetStruct AWS, Apache, IIS, MySQL, SQL Server, HAProxy, Nginx, Nagios, Prometheus, Grafana, Cacti - Created and implemented a hybrid high-availability web infrastructure on AWS integrating Linux and Windows Server environments. - Deployed Apache/PHP and IIS web applications connected to MySQL and SQL Server databases. - Applied load balancing and failover mechanisms using HAProxy, Nginx, and AWS Application Load Balancer (ALB). - Implemented full-stack monitoring and performance tracking using Nagios, Prometheus, Grafana and Cacti.

CERTIFICATES

- Modern Data Engineering for AI Systems Program SDAIA Academy - Forward.org Program McKinsey & Company - Computer Vision for Software Developer Program SDAIA Academy - Data Engineering using Google Cloud Bootcamp Tuwaiq Academy - Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate Oracle
